

LIKESTONE

You'd be stone mad to miss it.

Course Objectives

This course is an intensive 3 day training seminar, which provides the participants with the practical skills and knowledge to expertly install the 'Flex-c-ment' concrete overlay design.

Our goal is to use simple step by step methods to train you to apply the 'Flex-c-ment' overlay design and to provide you with an exciting business opportunity which will play an important part in the Irish launch of this innovative, dynamic product.

What is Flex-c-ment?

- The product is a lightweight concrete mix, which can be used to design a vast number of objects or imitate natural stone, brick, block, granite etc. Because of its adhesive strength and low slump properties it can be applied on a wide range of surfaces i.e., wood, polystyrene, plastered surfaces, painted surfaces, block, brick etc.
- Its flexion properties are such that it can be used where movement is expected; old or cracked concrete driveways, old plaster, existing structures i.e bridges, buildings, boundary walls, over plywood and plasterboard.
- The product is so versatile it can be applied on both horizontal and vertical surfaces. Its diversity is such that it can also be used to create fireplaces, wall capping, tiles, etc.
- Flex-c-ment's designs have a proven track record of durability and success. They have been rigorously tested by chemists and have been applied in construction for over twenty five years. Whether in freezing temperatures, sweltering heat or damp conditions our overlay designs have stood the test of time.
- The finished product continues to look beautiful after years of exposure to nature's elements. The flex-c-ment design has the appropriate EN declaration of conformity and is CE marked.

Who should attend?

This course is designed to train any interested individual on the simple principles required to competently install a flex-c-ment design, particularly those with a desire for self employment opportunities. While a formal trade or experience in the industry is not essential, this course may be of particular interest to stone masons, plasterers, brick layers, tillers or anyone with experience in the construction industry.

Course content

- Product & Company background.
- Overview of raw materials.
- Target markets.
- Overview of the process.
- Practical demonstration & trainee participation (for the various stages involved in vertical & horizontal overlay design).
- Demonstration of cost estimating and pricing jobs.
- Wrap up, evaluation and certification.

Course structure and methods

The course is made highly participative by the use of a variety of learning techniques including, presentation, group discussions, feedback, practical demonstration and hands on application of the design. You will be provided with a manual at the start of the course which will include product detail, application steps, techniques, colour charts, price lists and reference material for your future use.

Course Staff / Tutors

Stephen O'Connor, Director Likestone Irl Ltd

Venue

TBC

Dates

.....

Fees

Inclusive of tuition, training manual, CD rom and cost estimator, lunch, tea & coffee, the fee is €600. A deposit of €200 is payable at least 2 weeks in advance of commencement of the course. Any cancellations received within 7 days of the start date will result in the loss of deposit. The balance of the fee is payable on the first morning of the course.

Certification

You will receive a certification on completion of the course and Likestone Ireland Ltd. will provide an on-going back up service and a retraining provision for you free of charge.

Further information

If you would like to discuss this course or get more details, please contact the office at 051 845475 or alternatively you can contact Stephen O'Connor at 087 4189006 or 085 7377537
